

# Personal wall

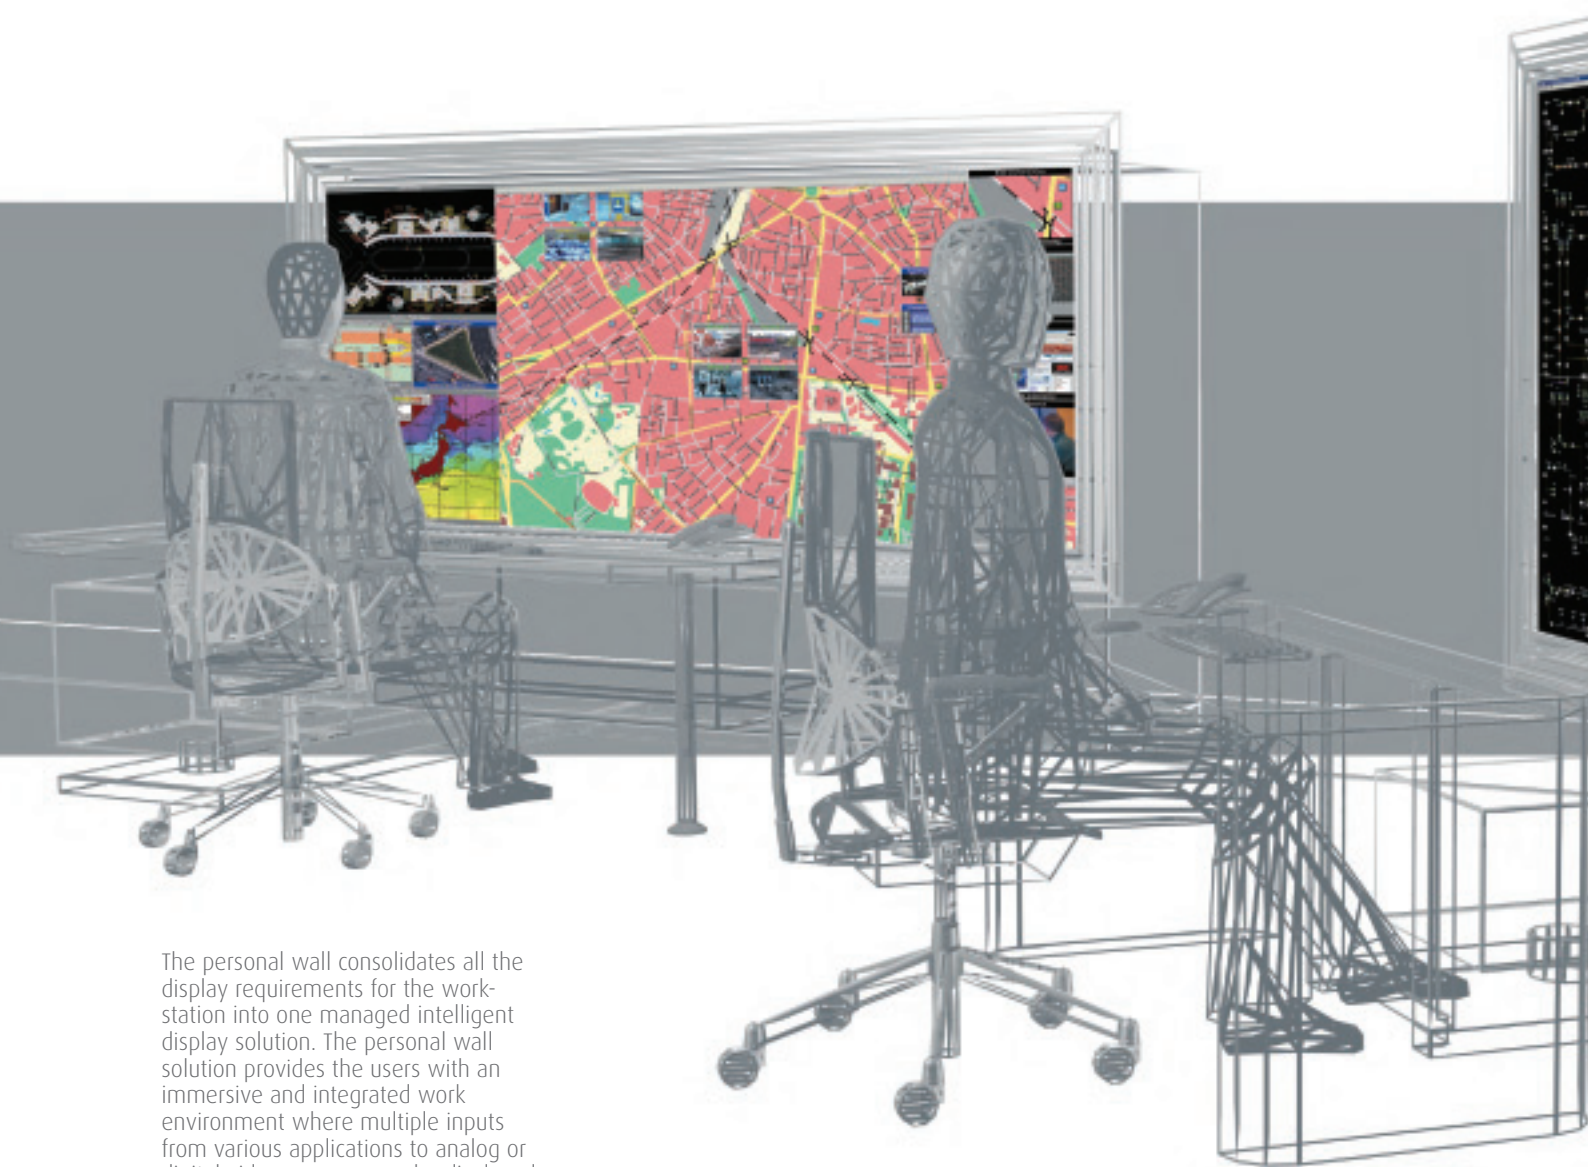

## Immersive event based response and control

The personal wall represents an immersive and flexible workstation for the control room. It can either be used as individual independent workstations or as a collaborative group of flexible workstations. The latter configuration allows the operators to respond to multiple incidents individually or manage a single incident with multiple operators to cover different perspectives. The personal wall's display size also allows for supervisory overviews by management without interfering with the operator's work.

- Integration of disparate displays
- Allows collaboration
- Increased flexibility
- Cost-effective installation & maintenance
- Individual situational response

The personal wall consolidates all the display requirements for the workstation into one managed intelligent display solution. The personal wall solution provides the users with an immersive and integrated work environment where multiple inputs from various applications to analog or digital video sources may be displayed on one single large screen display solution.

*In most control room applications, the user workstations are often cluttered with multiple monitors displaying various different systems as well as other video information*

*With a personal wall, this clutter of equipment may be reduced to provide a cleaner work area and in addition provide a seamless and more flexible viewing capability - without boundaries and also being able to simultaneously manage multiple applications and input formats*

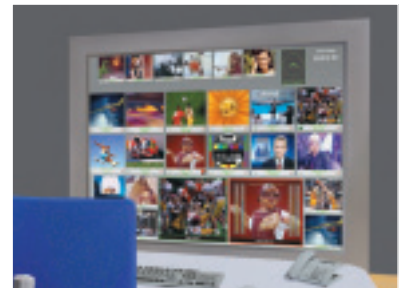

## Next generation work station console

### Benefits

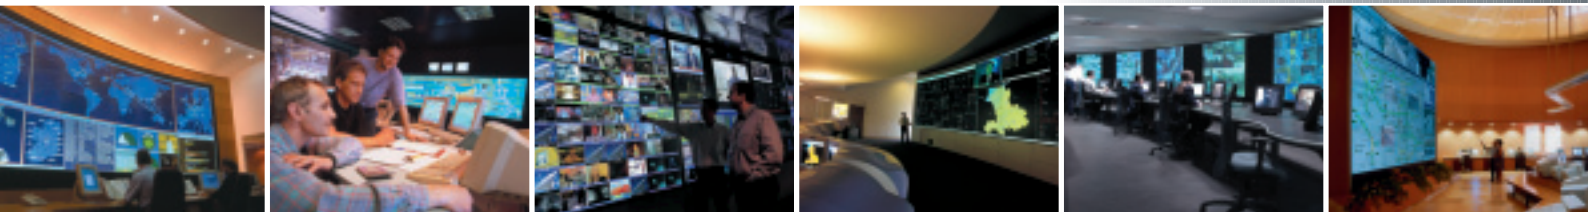

- Reduced Disparate displays that integrate all informational formats - video, data, RGB (computer monitor feeds)
- Allows collaboration between co-workers
- Individual situational response (in addition to common overview wall)
- Flexibility to reconfigure displays for different users or different situations
- Power and cooling savings versus monitors
- Installation and maintenance savings - cable management

*Ideal for smaller control rooms where one or two operators need to manage incidents. Example cases, security control rooms. The personal wall below has the ability shown to display 2 RGB feeds, 16 videos simultaneously and also host clients of network applications*

*Ideal for larger control rooms where a large number of operators need to work together or react to specific situations in conjunction and manage a large system. Example cases, traffic, utilities, telecom control rooms. Each of the above personal walls has the ability to display 2 RGB, 32 videos (analog and digital streaming) and also host clients of network applications*

Barco Control Rooms has become the industry standard in the field of monitoring solutions for Control & Operation Centers in telecom, traffic, surveillance, public utilities, broadcasting, finance and service providing companies. Barco Control Rooms is renowned for its flexible, market-specific approach, successfully implemented in over a thousand control rooms worldwide.

Fully committed to quality, Barco Control Rooms offers full technical support as well as on-site training. With its head offices in Belgium and Germany, Barco Control Rooms is represented in more than 30 countries across the globe. With a yearly R&D effort of 10% of its turnover, Barco Control Rooms ensures it remains at the forefront of technology.
