

Outdoor LED Display Solution

Stadium Genk [Genk, Belgium, 2002]

The Challenge

- A brand-new stadium that was built in 1999, the stadium's management decided in 2000 to invest in a 48 square meter Barco DLite 14 display. When the stadium was further upgraded in 2002, management wanted to split the existing display in two 24 square meter parts that would be placed on either side of the field.

The Barco Solution

- Barco's display systems are fully modular and can be built and rebuilt to suit the client's needs as they evolve. With a dedicated project management team, Barco redesigned and guided the upgrading and installation of the two new displays.
- "We are very proud to have the Barco displays at our stadium," says Mr Theo Sampermans, Technical Advisor for KRC Genk. "We have definitively enhanced the experience of the fans, and now host sold-out matches most of the time because spectators know they will get so much more than the match alone when they visit our stadium."
